INDEX TO ADJOINING SHEETS

THE NATIONAL GRID
TO GIVE A GRID REFERENCE CORRECT TO 100 METRES

EXAMPLE — Hill Farm

The Grid letters on this sheet are SK

EAST: Take west edge of kilometre square in which point lies and read the large figure printed opposite this line on north or south neutral. Estimate tenths Eastwards.

NORTH: Take south edge of kilometre square in which point lies and read the large figure printed opposite this line on east or west neutral. Estimate tenths Northwards.

Full 100 Metre Reference SK 430064

The above Full Reference is unique. For metric purposes the 4x4 grid letter can be omitted giving a reference 430064 which recurs at intervals of 100 Kilometres. If both grid letters are omitted, the resulting reference 43064 recurs at intervals of 100 Kilometres. When the area concerned is sufficiently restricted, as will usually be the case with maps on scales of one inch to one mile and larger, both the grid letters are normally omitted.

At the Eastern edge of this sheet True North is 0° 32' West of Grid North and at the Western edge it is 0° 28' West of Grid North. Magnetic North was about 9° West of Grid North in 1966, decreasing by about 1° in six years.

1 square inch on this map represents 17·778 acres on the ground.

The representation on this map of a road, track, or footpath is not evidence of the existence of a right of way.

SURVEY DIAGRAM

The figures shown on the dates of surveys of the Plan Sheet which are the latest dates on which information was received as these dates, but were taken from the previous Six Inch County Survey.

Reproduced from 1:2500 Map with the permission of the Controller of Her Majesty's Stationery Office.

Boundaries

Geographical County
coincident with parish
Administrative County coincident with Civil County
Administrative County or County Borough
Municipal (or Met. Borough, Urban or Rural District
Civil Parish
Borough or County Constituency

Where Admin Co, Co Boro and county district boundaries coincide only those of a civil parish, the symbols for both are shown alternately.

Heights

Values are given to feet above Mean Sea Level at Newlyn.
Contours are at 100 feet vertical interval.
Triangulation heights determined by ground survey / air survey.

Rock Features

Bench Marks and their values are shown on Large Scale plans, and Bench Mark list containing fuller and possibly later levelling information are obtainable from the Director General, Ordnance Survey.
