DESCRIPTION MIN. REF. NO. 117.. SCHEDULED.

"Adjacent to the ancient hall at Newbold Verdon is a terrace which descends to the level of the moat which encloses the other 3 sides of a quadrangle. The width of the moat is 28'. The banks on the NW + SW descend to a lower level, and the ground generally falls away ~~from~~ the hall. A number of ponds has suggested an outer + more extensive moat; but it is more probable that they are to receive the overflow from the moat and arrest the swamping of the lowlands"

The hall is described as plain brick of the first quarter of the C18.
