LEICESTERSHIRE	NEWBOLD VERDON	RKL64 (1-1)

Locality	Nat. Grid Ref.
FIELD No's. N.V. 12+13. IN CORNER OF BARLESTONE ROAD + BOSWORTH LA.	SK 40 NW SK 441045

Circumstances of discovery	Date site examined	Site now destroyed / threatened / preserved
FIELD WALKING	DEC 1979	PLOUGHED ✓

Present location of finds: M W HARDING. 57 ARNOLDS CRES. NEWBOLD VERDON. LEICS. DESford 3926.

Description of remains, precise location and stratification (attach plans if necessary)

The two fields (No's 12+13) are now one; and except for the extreme Eastern corner (which is sand and gravel) the geology is glacial boulder clay.

The finds were as follows:-

FLINT

1) One struck flint with the cortex on one side while the other side showing a cone of percussion. One edge has been worked with vertical strokes to blunt the edge.

2) One flake which vertically paring on one side, probably a waste flake, use to make blades.

3) One natural 'pot lid'.

POTTERY

1) Romano British; 3 sherds of Grey Ware and one sherd of Mortaria with mainly red grit. The four sherds were found within a radius of 50m of each other near to the N.W. boundary of the field.

2) The majority of the pottery sherds picked up can be dated to the last 250 years.

3) No medieval pottery was picked up from this field; As the area is known as 'The Heath' and may have formed part of the 'waste' during the medieval period.

Conclusions: This field will be 'walked' again to see if any further sherds of RIB pottery can be located. Documentary research may prove if this area was part of the medieval waste!
